Hi Joe,

Just checking in to see whether there is any progress setting up a quick call to ask EQT a few questions about some of your well completions, as per my previous email. I can easily provide a call-in number if one is warranted. Thanks!

Subject: EPA/EQT telephone call

Hi Joe,

Thank for agreeing to help EPA understand some of the EQT well completion information you've provided us. As I explained by phone today, we are interested in learning more about how EQT's cement-less production strings are installed.

- how they are made up and run in the hole,
- how the zonal isolation occurs, in the target zone between packers being stimulated
- how zonal isolation occurs above the uppermost production string packer
- how it ties into the intermediate string set
- how one monitors the system during stimulation

To help you plan, here are some example wells we've looked at:

WV 511780 - API #47-045-02216
WV 512555 - API #47-045-02257
K 568851 - API #16-195-10695

Both Chuck Tinsley and I could participate in a call with you and your colleagues on Thursday May 24 if that might work for you. I anticipate half an hour.
